0 -0.014	0 -0.018	0 -0.022

- It is recommended to use when long overall length is demanded for preventing collision with workpiece with high rigidity.
- For both machining center and manually operated machines.

Unit : mm

(Note) The intermediate diameter revolution is not tabulated. It is matched to the large diameter side and closest drill diameter conditions or by calculating the cutting speed of the closest drill diameter. Set the feedrate per revolution to a suitable value with the recommended feedrate of the closest drill diameter as the standard.

- 1) Lower the revolution and feedrate accordingly, when the work material is not rigid or there are restrictions on the machine.
- 2) When drilling holes greater than  $3 \times$  drill diameter hole depths, please use a peck feed.
- 3) The cutting conditions mentioned above are standard with the tool protrusion length was made 2 times the flute length.
- 4) Use of water-soluble cutting fluid is recommended. Please reduce the revolution when using water-insoluble cutting fluid.
- 5) Use sufficient cutting fluid. Please reduce the revolution when insufficient cutting fluid.
- 6) When using a guide bush, please confirm the flute length  $> A$ . In case of short flute length, please conduct machining without the bush.  
And, when not being able to dismount the bush, please use LSD or GWSL.
